PROFESSIONAL SUMMARY

Reliability and Automation Engineering executive with 17+ years leading mission-critical platform operations, observability, and incident response across large-scale capital markets and digital systems at Bank of America. Proven track record defining and enforcing reliability engineering standards — including service health monitoring, alerting, problem management, and operational readiness — across globally distributed engineering teams. Combines deep expertise in cloud-native architecture, event-driven systems, and AI-assisted automation to drive platform stability, reduce toil, and accelerate operational efficiency. Adept at building and developing high-performing engineering teams while partnering with senior stakeholders to align reliability practices with enterprise-wide digital servicing goals.

SIGNATURE IMPACT

- **\$8M** enterprise transformation → **40% performance improvement, 30% cost reduction**
- **AI-assisted engineering** → **35% faster delivery, 45% productivity gain**
- Scaled platforms from 10 to **50+ systems** with **99.97% uptime**
- Enabled **~\$2B capital efficiency** via risk platform transformation

CORE CAPABILITIES

Platform Reliability & Operational Stability (99.97% Uptime) | Monitoring, Alerting & Observability | Incident Response & Problem Management | Operational Readiness Standards | Automation Engineering & Toil Reduction | Cloud-Native Architecture (AWS, Kubernetes) | Event-Driven Systems (Kafka) | AI & GenAI Platforms (RAG, Agentic AI) | Global Engineering Team Leadership | Executive Stakeholder Management | Regulatory & Compliance Systems (FRB, FINRA, SEC) | Data Engineering (Spark, Databricks, ETL/ELT)

PROFESSIONAL EXPERIENCE

Bank of America — Director, Global Risk & Capital Markets Technology (2015 - Present)

- Defined and enforced reliability engineering standards across mission-critical trading and data platforms supporting **\$1T+ daily processing**, maintaining **99.97% uptime** across 50+ systems
- Established monitoring, alerting, and observability frameworks for real-time trading, pricing, and risk platforms, enabling proactive incident detection and rapid response
- Led incident response and problem management practices across globally distributed engineering teams, driving root cause analysis and systemic remediation to reduce recurrence
- Drove operational readiness programs ensuring all platform releases met stability, observability, and performance thresholds prior to production deployment
- Implemented AI-assisted automation and ML-based anomaly detection to reduce operational toil and improve service health visibility across the platform estate
- Modernized legacy systems into cloud-native, event-driven architecture (AWS, Kafka, Kubernetes), improving throughput by **40%** and reducing operational overhead by **30%**

- Built, managed, and developed global engineering teams (**30+ across US/UK/India**), driving **15% velocity improvement** through coaching, standards-setting, and Agile delivery practices
- Ensured regulatory compliance (FRB, FINRA, SEC) across all mission-critical systems, embedding compliance controls into operational runbooks and release processes

Bank of America — VP, Structured Products & Mortgage Technology (2011 - 2015)

- Led consolidation and stabilization of risk systems across structured products and mortgage trading, contributing to **~\$2B capital efficiency**
- Built real-time pricing and analytics platforms with embedded reliability controls, ensuring high availability and operational consistency for trading desk operations
- Introduced operational readiness and service health practices that reduced production incidents and improved mean time to recovery (MTTR) across the platform portfolio

Bank of America — AVP, Whole Loan Trading Desk Support (prior to 2011)

- Architected and delivered end-to-end Java EE trading support applications with high-availability design patterns
- Introduced CI/CD practices reducing release cycle from monthly to weekly, improving deployment reliability and reducing change-related incidents

Senior Programmer Analyst — Knight Trading (2004)

DB2 / WebSphere Administrator & Sr. Java Developer — Kyocera Mita (2003)

Sr. Java Web Developer — Mellon Investor Services (2001)

Sr. Java GUI Developer — Thomson Financials (2001)

Sr. Java GUI Developer — Icor Brokerage (2000)

AI & INNOVATION

- Building GenAI platforms (RAG pipelines, agentic AI systems) to automate operational intelligence and accelerate incident triage and resolution workflows
- Applied ML for anomaly detection, enabling proactive service health monitoring and reducing mean time to detect (MTTD) across production environments
- Driving AI-assisted SDLC and automation workflows to eliminate toil, improve delivery speed, and enhance operational quality at scale

EDUCATION

Bachelor of Technology — Anna University

SKILLS

Leadership: Executive stakeholder management, global team leadership (30+ engineers), P&L ownership, strategic planning, program management, SDLC, Agile, ITIL, SOX, FRB/FINRA/SEC compliance **Reliability & Operations:** Platform stability and observability, monitoring and alerting frameworks, incident response and problem management, operational readiness, toil reduction, high-availability platforms (99.97% uptime), MTTR/MTTD optimization **Architecture:** Cloud-native architecture (AWS, Kubernetes), enterprise architecture, event-driven systems (Kafka), distributed systems, CI/CD pipelines **AI & Data:** GenAI (RAG pipelines, agentic AI), ML anomaly detection, AI-assisted SDLC and automation, Spark, Databricks, ETL/ELT, Snowflake, Hadoop, Cassandra, MongoDB **Engineering:** Java,

Python, Node.js, SQL, Oracle, Sybase, REST/SOA, WebLogic, Kafka, Kubernetes, AWS **Tools:**
ServiceNow, JIRA, Git, Visio, Microsoft Project
